Build a python code, assume that temperature and humidity values generated with random function to a variable and write a condition to continuously detect alarm in case of high temperature.

```
import random
```

```
while(True):
```

```
    a=random.randint(10,120)
```

```
    b=random.randint(10,120)
```

```
    if(a>35 and b>60):
```

```
        print(" high temperature and humidity  
of:",a,b,"% alarm is on")
```

```
    elif(a<35 and b<60):
```

```
        print("Normal temperature and humidity
```

```
of:",a,b,"% alarm is of f")
```

```
break
```

OUTPUT:

```
main.py  Run  Shell  Clear
1 import random
2 while(True):
3     a=random.randint(10,120)
4     b=random.randint(10,120)
